RDS

Monocular video-oculograph  
for diagnosing saccadic eye  
movements and visual  
attention functions

Download the leaflet

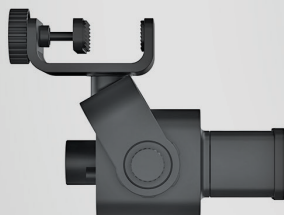

Monocular  
video-oculograph

# EYETRACKER

Scope of application:

Post-stroke rehabilitation

Diseases of the central nervous system

- + The absence of physical impact excludes the occurrence of stress tension caused by the use of technical means
- + High-speed imaging allows you to record slight changes in oculomotor activity
- + Cognitive reactions are recorded regardless of the person's condition and test conditions
- + Testing is not limited to a set list of prompting questions
