Interactive engagement with the patient
through the registration of their eye
movements

COMPLEX OF VISUAL AND COGNITIVE REHABILITATION

based on visual feedback

Scope of application:

Diagnosis

Rehabilitation

- + The absence of physical impact excludes the occurrence of stress tension caused by the use of technical means
- + Cognitive reactions are recorded regardless of the person's condition and test conditions
- + High-speed imaging allows you to record slight changes in oculomotor activity
- + Testing is not limited to a set list of prompting questions
